

## **Environmental management system and its implementation**

To effectively remove and treat waste generated during our processes and prevent water pollution, ensuring proper waste disposal and clean water resources, our company adheres to the environmental regulations set forth by the Ministry of Environmental Protection. We have developed a waste disposal plan and signed disposal contracts with qualified disposal plants approved by the Ministry of Environmental Protection, based on the characteristics of the waste and the treatment methods. After disposal, we track the legal and proper disposal flow and maintain records. Our company holds a water pollution prevention permit issued by the Tainan City Environmental Protection Bureau and has developed a water pollution prevention measures plan. We have installed wastewater (pre-treatment) facilities. Wastewater generated during our processes is treated in the pre-treatment facilities according to the runoff wastewater management plan and then discharged into the sewage system to the industrial park wastewater treatment plant. Our company also fulfills its environmental protection obligations to maintain the ecosystem, improve environmental hygiene, and protect the health of our employees.

In 2025, the total amount of recyclable waste will be 35.49 tons, hazardous industrial waste will be 35.17 tons, general industrial waste will be 61.662 tons, and wastewater discharge will be 8420 CMD.
